Senn Logistik GmbH

Then you've come to the right place. Whether it's a full or part load, Senn Logistik GmbH is your ideal partner for all your freight needs. With years of experience and an extensive network of partner companies, we are able to meet every customer's requirements.

Overview of Services

SENN LOGISTIK GMBH

Reliability and professionalism in logistics.

› FULL TRUCK LOADS

We offer a comprehensive transport network, based on long-standing partnerships, enabling us to cover European destinations for you both on a day-to-day basis and on a contract basis. From standard to mega to coil-mega trailers, we offer all types of trailer configurations on request.

› TIME-CRITICAL

Deadlines are part and parcel of our business. Thanks to our clear focus on quality, we take into account all factors that may affect your shipment right from the planning stage, ensuring timely loading and unloading.

› SPOT LOADS

Our expert team of transport managers can process and fulfil your short-notice spot enquiries across the whole of Europe quickly and reliably. Our primary focus is always on quality and, consequently, on your satisfaction as a customer. From standard to mega to coil-mega trailers, we offer all types of trailer configurations on request.

› SPRINTER LOADS

For loads up to 3.5 tonnes, we primarily use Sprinters. This enables us to offer the shortest possible delivery times across Europe. Our experienced staff take care of every aspect of your transport and ensure that your goods arrive safely and on time.

› GREAT BRITAIN

Full loads to and from the UK — including ferry and Eurotunnel.

History

The SENN Group was founded in 2001 with its first company, KS Kneissl & Senn Technologie GmbH. Originally based in Kufstein, the group is now headquartered in Erl. In addition to logistics services, the group also supplies industrial products for various sectors. Since 2001, we have been characterised by continuous, sustainable growth.

Sustainability

At Senn Logistik GmbH, we are aware of the negative environmental impact of lorry traffic. It is therefore important to us to actively contribute to environmental protection whilst continuing to offer our customers a high-quality service. We actively utilise solar power and hydropower, an electric vehicle fleet and buildings constructed exclusively to low-energy standards to reduce CO₂ emissions as much as possible.

Through careful planning and efficient management, we can optimise the distance travelled by our vehicles, thereby reducing fuel consumption and, consequently, emissions. We are convinced that, as your logistics partner, we play an important role in shaping a 'greener future', and are therefore proactively committed to sustainable solutions.

This approach is an integral part of our corporate philosophy and our commitment to you and the environment.
